Room:	
School:	
Term & Year:	

Experiencing Marine Reserves (EMR) empowers schools and communities by providing hands-on experience in the ocean.

*EMR is a programme of Mountains to Sea Conservation Trust www.mountainstosea.org.nz* 

# To start, complete the first two columns and the question below.

What we know	What we would like to find out	What we learnt (complete at the end)

# How important do you think marine conservation is for the marine environment?

(circle the appropriate symbol)

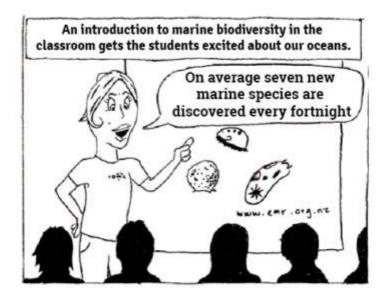

# Classroom Workshop: Marine Biodiversity

Match the words with the correct definitions.

Marine	the environment where a plant or animal lives
Biodiversity	eats plants and animals
Habitat	anything to do with the sea/ocean
Native	naturally found in a place but may be found in several different places
Endemic	eats only plants
Herbivore	the number and type of different living things
Omnivore	eats only animals
Introduced	naturally found in only one place
Carnivore	has been accidentally or deliberately transported to the new location by human activity

# Name examples of marine biodiversity from New Zealand.

1.	
2.	
3.	
•••	

# Name habitats featured in your EMR presentation.

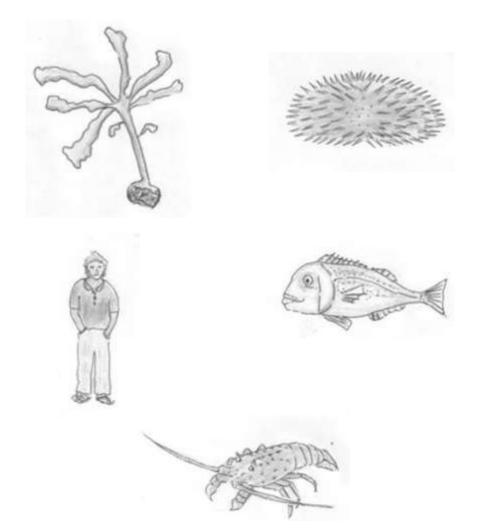

1.	
~	
2.	
3	
υ.	

# **Kina Barren Story**

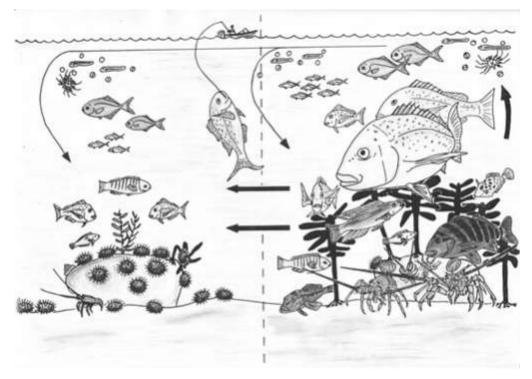

Draw arrows from one organism to the next to show what eats what.

The arrows show a transfer of energy. For example  $BIRD \rightarrow CAT$ 

#### Read the 'Hungry Kina' story from the EMR web site www.emr.org.nz

<sup>6</sup> The diagram below is based on Goat Island Marine Reserve, describe the difference in both sides below.

"We had no reason to believe that Kina Barrens, widespread throughout Northern NZ, were anything but a natural occurrence. We now know they are an artefact of overfishing. Kina Barrens have all but disappeared at Goat Island and Tāwharanui Marine Reserves... "

- The late Dr Roger Grace - Marine Biologist

# Te Reo Māori — fill in the blanks...

Moana	
	Snapper
Kina	
	Crayfish
Tangaroa	
	Kingfish
Wheke	
	Mussel
Kaimoana	
	Starfish

<sup>3</sup> One fascinating fa	act I learnt
Something I woul about	d like to find out more
A question I have	is

# Introduction to Snorkelling: Pool Session

#### Equipment

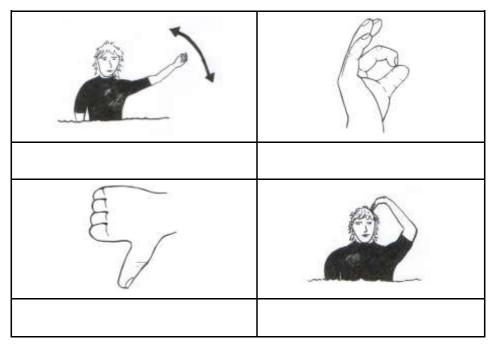

Label the following equipment with their correct names.

#### Communication

1 whistle blast means 3 whistle blasts means

Write the meaning of the signals below the pictures.

Three things that I learnt about snorkelling

1.	
2.	
3.	

## I would like to improve my snorkelling skills by

# My Local Unprotected Marine Area

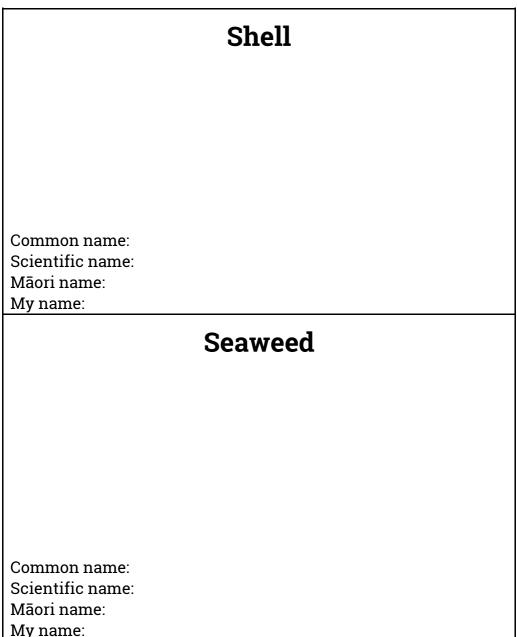

#### Name of area

#### **Scavenger Hunt**

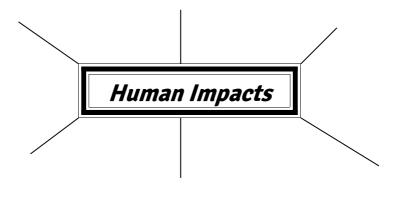

Write or draw what you found for each box. There must be something different in each box. Leave everything where you found it, except for the rubbish!

Rough	Slippery
Smooth	Human Rubbish
Shell	Seaweed
Round	Sharp
White	Bright Colour
See through	Multi-coloured

Find a shell and some seaweed, and make a detailed pencil drawing.

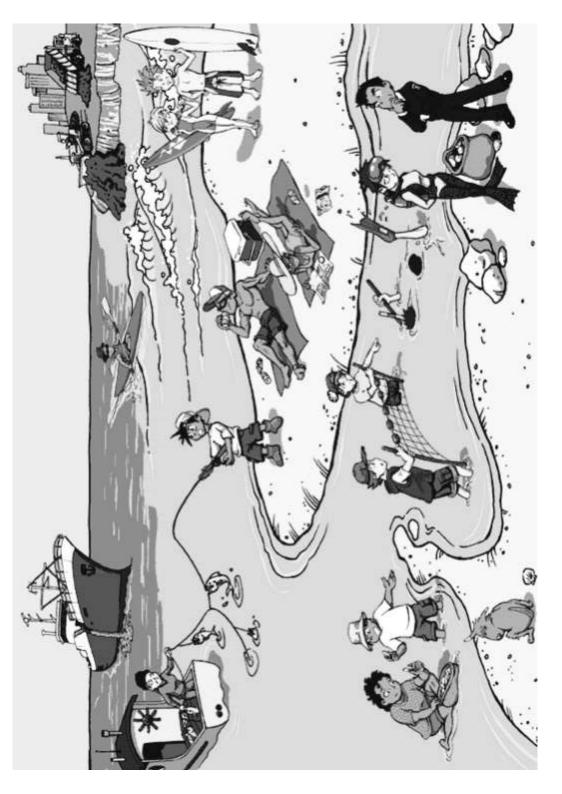

13 Brainstorm below how humans have affected or changed your local area. The picture on the next page may help you.

Circle those that you think are positive. Put a rectangle round that are negative. Some may be both!

Choose two of your impacts from above and fill in the table below.

Effect on Marine Life

### <sup>15</sup> Local Area Investigation Questions

What activities are happening in the local marine area?

How do the locals use and view the area?

What impacts the activities have on the marine environment?

Describe your local area, how has it been modified by humans over time?

#### **After Your Local Investigation**

Write an email to someone about what you saw. e.g. What did you see? Plants? Animals? How many and what size? How did your experience make you feel?

en

Tick once completed

# **Planning your action project**

*This is where you can become a kaitiaki or guardian and make a difference to your local marine area.* Choose the issue/human impact that you relate to the most.

What is the issue most	What is your goal or	Who could help me
important to you?	vision?	achieve this?
What will I need to	What obstacles/	What will my action be
research?	problems could I face?	to achieve this?

# **Marine Reserves Investigation**

Answer true or false for the following sentences	True (T) or False (F)
Scientific study is not allowed in a marine reserve.	
Feeding the fish can change their natural behaviour.	
You are allowed to collect shells in a marine reserve.	
Up to 80% of NZ's biodiversity is found in the sea.	
Commercial fishing is allowed in a marine reserve.	
Less than 1% of NZ's mainland coast is fully protected compared to up to 30% of the land.	
On average 7 new marine species are discovered every fortnight.	
You are not allowed to swim, snorkel, dive or picnic in a marine reserve.	
Cape Rodney—Okakari Point (Goat Island) was the first marine reserve in NZ.	
The Maori name for snapper is tāmure.	

## **Location of NZ's Marine Reserves**

Label at least three places on the map where there are marine reserves.

www.doc.govt.nz/marinereserves

# <sup>20</sup> Research your two closest marine reserves

Name of reserve?	
Size	
How long has it been a marine reserve?	
Iwi/hapu	
One other fact	
Draw the shape of the marine reserve	

# **A Rocky Shore Area**

## (marine protected or local area)

# **Biodiversity Treasure Hunt**

Courtesy of John Walsby

Check out the rocky shore and see how many of the following you can spot!

Echinoderms							
	<b>Kina</b> Have a mouth underneath that has five chisel like teeth that grinds up food.						
ACC - Contraction of the contrac	<b>Starfish</b> Long arms have hundreds of suckered tube feet on the underside. The 11 armed star eats mussels, kina and clams.						
	<b>Cushion Star</b> Usually 5 arms, but sometimes 4, 6, or 7 arms. Feeds by inverting its stomach through its mouth to digest what- ever it is smothering.						
S.S.S.	<b>Brittle Star</b> Will often break up if taken out of water.						
Sea Anemones							
*	A simple, soft-bodied tube shaped animal with a large mouth at the top surrounded by a crown of tentacles. The tentacles catch prey and push it through the mouth to be digested.						

Molluscs							
	<b>Chitons</b> This flexible shell bends to fit the lumps and hollows of rough rocks.						
	<b>Snails–Grazers: Rounded (Nerita or Cats-eye)</b> Clings to rock or crawls on muscular foot. Withdraws into shell if detached. Most have a lid to close the shell opening.						
	Snails—Grazers: Shaped like spinning tops (Topshells) See above information.						
	<b>Snails–Grazers: Limpets</b> See above information.						
	<b>Snails—Predators &amp; Scavengers: Whelks</b> Usually pointed at both ends. Have a breathing tube protruding from front for sensing prey or caution.						
	<b>Oysters</b> Have one shell cemented firmly to the rock or other shells. Top shell thick and often sharp edged.						
<b>No</b>	<b>Mussels</b> Thin, smooth, streamlined shells anchored to rocks by tough elastic threads called byssus.						
<b>C</b>	<b>Clams</b> Thick or thin shells, usually in equal pairs. Most bur- row into sand or mud, but some bore into rock or hide under boulders.						

Crustaceans							
	<b>Crabs</b> Flat or wedged shaped body with four pairs of walk- ing legs plus one pair of pincer legs. Reduced tail is tucked away under body.						
	<b>Hermit crabs</b> Live in empty snail shells, and have twisted bodies to fit shell. Never out of water.						
A CONTRACTOR	<b>Shrimps</b> Small long-bodied animals with slender walking legs and swimming legs under a muscular tail. Tail has a large tail fan and can flick forwards or back to power shrimp through water.						
	<b>Sand hoppers</b> Some have flattened legs for digging or kicking as they jump. Often found under the driftline debris (e.g. seaweed), or that which they eat.						
and the	Acorn barnacles Small to tiny crustacea living inside boxes made from chalky shell plates that is cemented to hard surfaces. Under water their lids open so that long feathery legs can beat through the water to strain out the plankton.						
Fish—vei	ry shy! You will need to sit very still!						
	<b>Triplefins</b> Small blunt headed fish with three distinct dorsal fins. About 20 species, many are less than 5cm long.						
	<b>Clingfish or sucker fish</b> Small fish with broad flat heads. Pelvic fins modified to form sucker on belly for clinging to rocks or seaweed.						
	<b>Rockfish</b> Long dark fish with scaly bodies. A thick skin of mu- cus helps them survive under stones when the tide is out.						

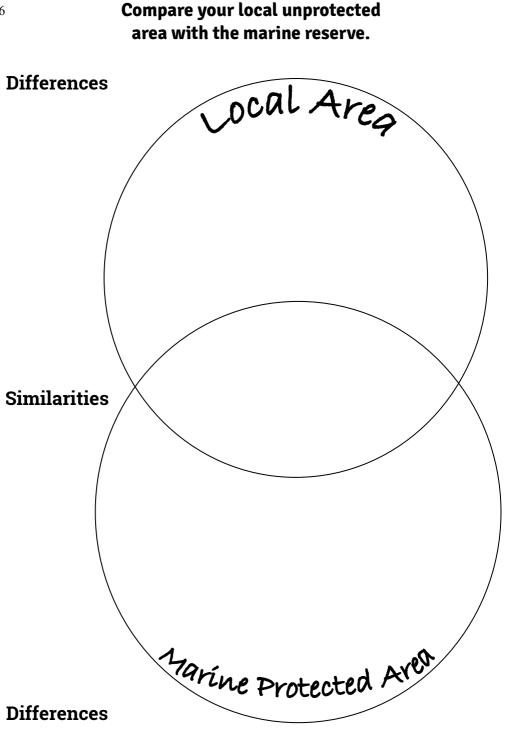

Worms						
Canada	<b>Chalky tubeworms</b> Segmented worms with crowns of head tentacles for filtering plankton. Their chalky tubes are cemented to the rock and give protection from dry- ing out and predation.					
	<b>Soft (parchment) tubeworms</b> Segmented worms in soft papery tubes either buried in sand or attached under boulders.					
	<b>Ragworms</b> Free-roaming segmented worms living in sand or under boulders. Small jaws inside their mouths are used to grab animal food and rasp off the flesh.					
Birds						
	<b>Red-billed gull</b> A confident scavenger.					
	<b>Black-backed gull</b> A confident scavenger.					
T.	<b>Northern variable oystercatcher</b> Often seen on rock flats at low tide.					
×	<b>Pied shag</b> These roost in pohutukawa trees over-arching the beach at Goat Island.					
A A	<b>White-faced heron</b> Often seen on rock flats at low tide.					

<sup>25</sup> Identify and draw three fish that you saw while snorkeling. Use the fish ID cards to help you.

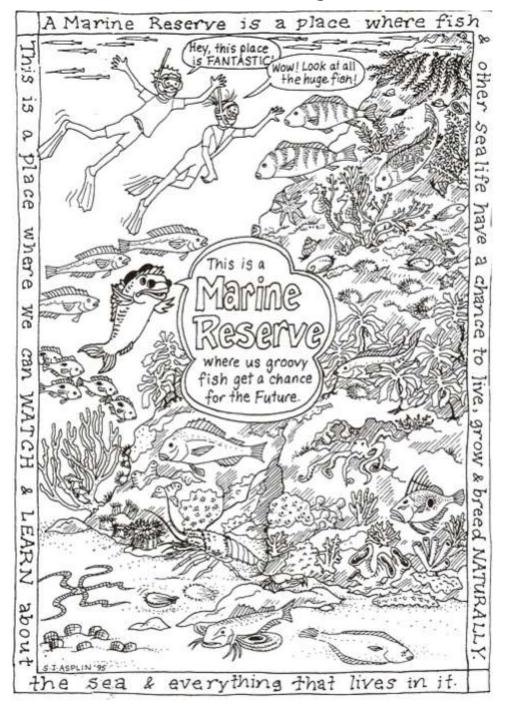

# Fish 1: Fish 2: Fish 3:

**On a scale of 1 – 10** (10 being the highest and most healthy). Rate the well-being or Mauri of your protected marine area by the emotions you felt underwater. Mark the line below.

#### Colour in this image

#### A quiz on New Zealand's oldest marine reserve, Motu Hawere a Maki—Goat Island

- Marine reserves protect unique, ..... and representative examples of our coast.
- What are marine reserves most equivalent to on land?
- What are the 6 main things you can do at Goat Island?
- What's the Māori name for Goat Island?
- When was Goat Island marine reserve officially opened?
- What are 6 main benefits of marine reserves?
- What do limpets eat?
- What do goat fish have under their jaws?
- How many eggs does a female koura produce?
- What do snapper eat?

#### 31 While I was part of the Experiencing Marine Reserves programme

I was surprised to find...

I really liked...

I thought that...

I felt happy when...

I learned that...

## <sup>32</sup> I didn't understand...

The strongest feeling I have is...

I was pleased to see that...

I didn't like...

Now I want to...

I will always remember...

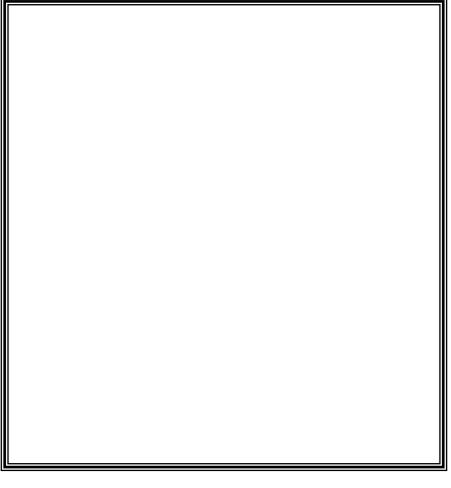

# Now that you have experienced a marine protected area, how important do you think marine conservation is for the marine environment?

(circle the appropriate symbol)

#### 34 Draw a picture or symbol or write a whakatauaki (proverb) that represents your time with the Te Kura Moana–EMR programme.

Where to next.... Check out the EMR student alumni page on our website www.emr.org.nz
